Digital access control for 2-wire
cabling

State-of-the-art access control for every
home

niko

State-of-the-art access control for every home

Imagine being able not only to hear but also **see whoever comes knocking** at your front door **before you let them in**... Imagine being able to do so from anywhere: whether it be **the other side of your house or the other side of the world**... And imagine being able to **install it without changing any cables**...

The Niko **2-wire access control** system now places the **comfort, convenience** and **security** of remote video access control at your fingertips. Via an **intuitive, secure** and fully **customisable** system that's **as easy to install as it is to use**. And accompanied by a **secure mobile app** that gives you complete control, even on your smartphone.

Discover **state-of-the-art access control** that was made **for every home**.

Do you want more information?

Visit www.niko.eu today to find out how the Niko 2-wire access control system can make your life easier.
Or ask your electrical installer for more information.

Full control at your fingertips

See **who's at your door** and, if you choose, **open it for them**. Easily, securely and from anywhere. Niko's easy-to-use touchscreen interface gives you full control, using either an **internal video unit** or **your own smartphone**.

No extra cabling required

Niko's new 2-wire access control system means you can replace your existing doorbell or intercom **without having to rewire** your entire home! Unlike other digital products on the market that require a minimum of 3 wires, Niko's 2-wire solution uses the same 2 wires for power and digital communication. Making this the **perfect digital solution for existing homes!**

Award winning design

Both the internal and external video unit have a **stylish, modern** design. The **robust aluminium casing** ensures that the unit can be seamlessly integrated into any façade. The external video unit is easily found, even in the dark, thanks to the **illuminated light behind the nameplate**. A safe, discrete and sturdy video unit that will suit any home.

Top quality camera

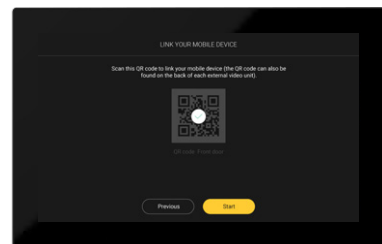

The external video unit has a **high definition camera** that is equipped with **infrared technology**. Even in the pitch dark, you can clearly see your visitors in detail. Thanks to the **wide camera angle** (no less than 155°), it is easy to keep your visitors in view, even when they move.

Fully secure

You and only you decide who can access your home. All internal video units are connected to the Niko access control module securely. The mobile app, in turn, can only be activated by a **unique login** and password known only to you. And once installed, the **QR code** used to connect your mobile device **becomes inactive**. Which means nobody can gain access to your system without your permission.

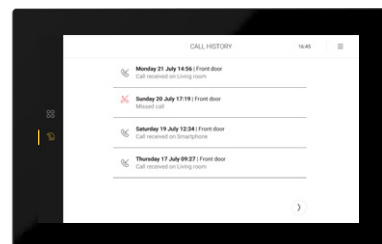

Always stay connected

Of course you're not always at home. But even when you're away, you can stay connected to your front door. Download the **Niko Access Control app** and see what's happening outside your door. Open your door **whenever and wherever you want**: from around the corner or around the globe. Great if you're running late for visitors or want to **let in** the cleaner, plumber or postman. And if you happen to rent your home out for holiday accommodation, you can even check your guests in **remotely**.

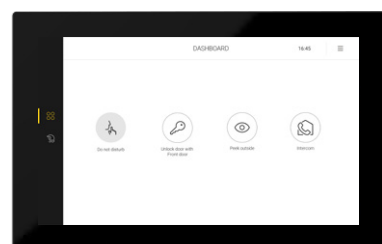

Full control at home

Want to see who has been at your front door when you were not there? Whoever rings your bell was **recorded**. Using the **internal video unit** you can **replay any visit**.

Peek outside at any time

Do you hear strange noises outside? Or maybe you're on holiday? Using the 'Peek outside' function you can **see what is happening at your front door without opening it**.

Modular system

All components of the Niko 2-wire access control system are available for purchase separately. Which means you can **completely customise it to your individual needs**. Use either a Niko internal video unit or your own mobile device. Or both!

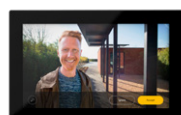

You can connect **up to 5 internal video units to the same module** and even use them as an **intercom** to connect different parts of your home. Or what about a **second external video unit** for your back door or home office? The **possibilities are endless**.

Video kit, 2-wire, with access control module, external and internal video unit
ref. 510-01501

Videokit, 2-wire, with access control module and internal video unit
ref. 510-01001

Additional internal video unit, 2-wire
ref. 510-50000

Additional compact 2-wire external video unit
ref. 510-31001

3-step installation

1. **Connect** the external video unit to the Niko access control module using a standard 2-wire cable.
2. **Pair** your internal video unit(s) or mobile device.
3. **Control** access via the easy-to-use interface.

Niko designs electr(on)ic solutions to enhance buildings to better suit the needs of the people who live and work in them. By using less energy, by improving light comfort and safety and by making sure all applications work together seamlessly. Buildings with Niko are more efficient, are controllable from a distance and interact within bigger ecosystems. Niko is a Belgian family business from Sint-Niklaas with 700 employees and 10 European branches.

At Niko, there is one question that keeps us busy every day: "How can we enhance buildings to better suit your needs?"
