05-309	Antenna with 3 m connecting cable with connector. Connectable to all modular Niko RF receivers (868.3 MHz).
05-318	The hand-held transmitter controls a maximum of 15 circuits, independent of one another. It has a visual check (LED) of the channel selection and operation status.
05-353	<p>Wireless dimmer for DIN-rail mounting. RF dimmer for DIN-rail mounting is suitable for 230V incandescent lamps, 230V halogen lamps and all types of low-voltage halogen lamps. Automatic selection of the dimming principle. Control occurs using a push button or a remote control unit. Up to 30 operations. There are 5 different operating modes: 1 or 2 push button control and use with or without memory function. Supplementary memory for saving 1 atmosphere. Possibility to switch off the light with an operating time of 3 seconds or with a run time from 0" to 3'. Indication of operation or error diagnosis using LEDs.</p> <ul style="list-style-type: none"> <li>• Wire capacity: 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal</li> <li>• Input voltage: 230 Vac ± 10 %, 50 Hz</li> <li>• Minimum load: 60 W/60 VA</li> <li>• Maximum load 230V-halogen lamps: 750 W</li> <li>• Maximum load electronic transformer: 750 VA</li> <li>• Maximum load ferromagnetic transformer: 750 VA</li> <li>• Maximum load bulb: 750 W</li> <li>• PLC interference suppression: this dimmer is equipped with interference suppression of PLC signals (frequency dips up to 3 Hz). This integrated interference suppression attempts to remove as many interfering signals as possible from the mains in order for most lamps to function optimally, without flashing or humming.</li> <li>• Protection from overload: thermal overload protection with automatic reset function</li> <li>• Short circuit proof: electronic short-circuit protection</li> <li>• Capacity reduction: at an ambient temperature above 35°C the maximum load will gradually decrease (see technical manual)</li> <li>• Connection terminals: 3 connection terminals on top and 3 connection terminals underneath</li> <li>• DIN dimensions: DIN 2TE</li> <li>• Marking: CE</li> </ul>
05-360	The universal wireless Easywave dimmer (single-pole, one-channel) is suitable for flush mounting and may only be used to wirelessly switch and dim lights up to a maximum of 250 W. You can also directly connect a fixed N.O. push button to this dimmer. With a wireless Easywave push button or an Easywave hand-held transmitter (one- or two-button control) connected to the dimmer, the lighting is always gradually switched on and off and dimmed up and down. To switch or to dim the lighting locally, you can also connect a fixed N.O. push button to the dimmer. The integrated, electronic short-circuit, overload and overheating protection guarantees maximum safety during use. Attention: The dimmer may not be used to switch or to dim electric motors. The product is part of the Easywave radio frequency system, a wireless installation technique between the push buttons (control points) and the consumers to be operated. The Easywave system is a modular system with transmitters and receivers. A wall transmitter has the form of a push button with two, four or eight action buttons and can be mounted on a wall. A hand-held transmitter looks like a traditional remote control unit. One transmitter can operate an unlimited number of receivers simultaneously, while one receiver can be controlled by a maximum of 32 transmitters. The remote control or wireless control operates on the basis of signal transmission via radio waves at a frequency of 868.3 MHz. This frequency only allows products that emit signals no more than 1% per hour or 36 seconds, which reduces the risk of interrupted signals to an absolute minimum. Therefore, the wireless Easywave system is excellently suited to specific applications, such as renovations of listed interiors, extensions of existing electrical installations (where drilling or channelling is not possible), for use in offices with moveable partitions or walls or in installations where complicated wiring must be avoided.
05-361	The wireless Easywave receiver with 230 V two-way switching contact (one-channel) is suitable for flush mounting and may only be used as a wireless Easywave control in combination with small consumers. With this wireless Easywave receiver, small consumers can be switched in one of the following three working modes: two modes for the on-off function and pulse mode. You can operate the receiver using either push buttons or hand-held transmitters. The product is part of the Easywave radio frequency system, a wireless installation technique between the push buttons (control points) and the consumers to be operated. The Easywave system is a modular system with transmitters and receivers. A wall transmitter has the form of a push button with two, four or eight action buttons and can be mounted on a wall. A hand-held transmitter looks like a traditional remote control unit. One transmitter can operate an unlimited number of receivers simultaneously, while one receiver can be controlled by a maximum of 32 transmitters. 100-03000	<p>N.O. or N.C. push button with 4 connection terminals, base, screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, cream. The key and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-60000	<p>N.O. push button with 3 connection terminals, base, screw terminals and finishing set with lens cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for N.O. push button with 3 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set with lens for single switch or push button, cream. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-60900	<p>N.O. push button with 3 connection terminals, base, screw terminals and finishing set with text field cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for N.O. push button with 3 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, cream. The key and the intermediate plate (board) form one unit. The central plate contains a transparent text field to which you can easily add short text or icons. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The base material is coloured in mass.</li> <li>• Colour: cream (coloured in mass, approximately RAL 1013)</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

100-61600	<p>Two-way switch, base, screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-way switch or two-way pull switch 10 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, cream. The key and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-62600	<p>Double two-way switch, base, screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a double two-way switch, 10 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. The bottom of the base is provided with two rectangular recesses for the integration of two lighting units. A lighting unit with wires can be clicked in the left and right recess.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, cream. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The base material is coloured in mass.</li> <li>• Colour: cream (coloured in mass, approximately RAL 1013)</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Certification marks: CEBEC</li> <li>• Marking: CE</li> </ul> <p>Finishing set with transparent ring without symbol for 6A push button with amber LED with E10 lamp base. This central plate is clicked onto the base of the 6A push button. The key has a transparent rim along which the light is distributed if the push button is illuminated. The side ring allows the LED to indicate when the light is activated. It can also be used as a sort of indicator lamp. 100-64800	<p>Timer, tunable to 15 mins, base, screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Base for 2-pole timer, adjustable up to 15 minutes, 16 A/250 Vac, screw fixing. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 40 mm</li> <li>• Marking: CE</li> </ul> <p>Finishing set for timer, tunable to 15 mins., cream. The central plate (slot 1 x 5 mm) is screwed onto the time switch. The setting key is mounted over the control axis of the mechanism. The central plate is equipped with an indelibly imprinted time scale in minutes with the intervals 0, 3, 6, 9, 12 and 15.</p> <p>This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-65018	<p>Two-way switch + N.O. push button, base, plug-in terminals and finishing set, cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a double switch: two-way switch and N.O. push-button, 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. The bottom of the base is provided with two rectangular recesses for the integration of two lighting units. A lighting unit with wires can be clicked in the left and right recess.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, cream. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 45 x 45 mm</li> </ul> <p>Central plate data 2x RJ, cream. At the top, the central plate is equipped with a hinged, non-transparent window with label. Dimensions label: 9.5 x 42.4 mm. To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-66100	<p>Socket outlet with earth pin and shutters, flush-mounting depth 21 mm, base, screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Base for socket outlet with pin earthing and shutters, flush-mounting depth 21 mm, 16 A/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Finishing set for socket outlet with earth pin and shutters, flush-mounting depth 21 mm. 100-66500	<p>Socket outlet without earthing, with shutters, flush-mounting depth 21 mm, base with screw terminals and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Base for socket outlet without earthing, flush-mounting depth 21 mm, 16 A/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, KEMA, NF</li> </ul> <p>Finishing set for socket outlet without earthing, with shutters, flush-mounting depth 21mm. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for socket outlet with earth pin and shutters, flush-mounting depth 28.5 mm. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <p>The socket outlet is equipped with contact buses with a large contact surface area which do not rest on the base in order to clasp and plug-in terminals with releases. These screws have combination screwheads (Pz2 slot 1x6 mm). Moreover, each screw is equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The base of the socket outlet is made of urea-formaldehyde (UF), light grey RAL7035. The base is highly heat resistant; it does not melt when exposed to high temperatures, as opposed to thermoplasts. All connection terminals are located on the top and can contain up to 4x2.5 mm<sup>2</sup> of wire; the earthing terminals can even contain up to 2x2.5 mm<sup>2</sup> + 2x4 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. The flush-mounting frame is equipped with a round cut-away, on the bottom-left directly above the groove. This opening makes the LED of the voltage indication module visible. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 1x5.5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made of 1 mm-thick metal and after cutting is galvanized on all sides, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more socket outlets can be quickly and easily carried out. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several socket outlets. The folded-up edges on the outside of the flush-mounting frame and their continuation to the inside lend an additional robustness to the frame. Vertical coupling of the socket outlets, centre distance 60 mm, is carried out by telescoping the flush-mounting frames. These are automatically locked into place. For vertical coupling of socket outlets, centre distance 71 mm, the flush-mounting frame is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this socket outlet rests perfectly on the one below and the centre distance of 71 mm is guaranteed. The 4 rectangular openings (7x2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall. The combination of a socket outlet, a voltage indication module, a central plate and a flush surround plate has a protection degree of IP41. Flush-mounting depth socket outlet with voltage indication module = 34 mm. Surface-mounting height = max. 9.2 mm. Voltage indication module has CE marking. Socket outlet is CEBC, NF approved.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Marking: CE</li> </ul> <p>Finishing set with transparent lens for socket outlet with voltage indication, earth pin and shutters, flush-mounting depth of 28.5mm. 100-66905	<p>Base for socket outlet with side earthing, flush-mounting depth 28.5 mm, 16 A/250 Vac, plug-in terminals, cream.</p> <ul style="list-style-type: none"> <li>• Certification marks: ÖVE, KEMA, VDE, SEMKO</li> </ul> <p>Base for socket outlet with side earthing, flush-mounting depth 28.5 mm, 16 A/250 Vac, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. The socket outlet has side earthing in high quality brass. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: ÖVE, KEMA, VDE</li> </ul> <p>Finishing set for socket outlet with side earthing and shutters, cream. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set with lens for single switch or push button, cream. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: ÖVE, KEMA, VDE</li> <li>• Marking: CE</li> </ul> <p>Finishing set for socket outlet with side earthing and shutters, cream. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-69600	<p>2 x multiple coax connections for TV and FM, base and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Base for 2x multiple coax connection for TV and FM, claw fixing. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 29.5 mm</li> <li>• Marking: CE</li> </ul> <p>Finishing set for 2 single coax connections for TV or FM. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <p>Central plate data 2x RJ, cream. At the top, the central plate is equipped with a hinged, non-transparent window with label. Dimensions label: 9.5 x 42.4 mm. To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The base material is coloured in mass.</li> <li>• Colour: cream (coloured in mass, approximately RAL 1013)</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing: 45 x 45 mm (HxW)</li> </ul>

100-76000	<p>Blind plate with strain relief, base and finishing set cream.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Blank plate with strain relief, claw fixing. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, cream. The key and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 100-88000	<p>Electronic thermostat, cream. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is made of rigid PC and ASA. The base material is coloured in mass. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. 101-60000	<p>N.O. push button with 3 connection terminals, base, screw terminals and finishing set with lens white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for N.O. push button with 3 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set with lens for single switch or push button, white. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-60908	<p>N.O. push button with 3 connection terminals, base, plug-in terminals and finishing set with text field white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for N.O. push button with 3 connection terminals, 10 A/250 Vac, plug-in terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, white. The key and the intermediate plate (board) form one unit. The central plate contains a transparent text field to which you can easily add short text or icons. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-61500	<p>Two-circuit switch, base, screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-circuit switch, 10 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. The bottom of the base is provided with two rectangular recesses for the integration of two lighting units. A lighting unit with wires can be clicked in the left and right recess.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, white. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-61618	<p>Two-way control switch with 4 connection terminals, socket, plug-in terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-way switch or two-way pull switch 16 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, white. The key and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-62200	<p>Double pole two-way switch, base, screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-pole two-way switch, 10 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for single switch or push button, white. The key and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The base material is coloured in mass.</li> <li>• Colour: white (coloured in mass, approximately RAL 9010)</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

101-63608	<p>Two-way pull switch, base, plug-in terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-way switch or two-way pull switch 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for pull switch, white. The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, white. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-65167	<p>2 RJ45 connections STP cat. 6, flat model, base and finishing set white.</p> <p>2 RJ45-connections STP cat. 6, flat model, incl. base 60 x 71 mm with claw fixing.</p> <p>Universal base 45 x 45 mm. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 45 x 45 mm</li> </ul> <p>Central plate data 2x RJ, white. 101-66100	<p>Socket outlet with earth pin and shutters, flush-mounting depth 21 mm, base, screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Base for socket outlet with pin earthing and shutters, flush-mounting depth 21 mm, 16 A/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Finishing set for socket outlet with earth pin and shutters, flush-mounting depth 21 mm. 101-66500	<p>Socket outlet without earthing, with shutters, flush-mounting depth 21 mm, base with screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> </ul> <p>Base for socket outlet without earthing, flush-mounting depth 21 mm, 16 A/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, KEMA, NF</li> </ul> <p>Finishing set for socket outlet without earthing, with shutters, flush-mounting depth 21mm. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. 101-66602	<p>Double, horizontal socket outlet with earth pin and shutters, screw terminals, flush-mounting depth of 28.5 mm, incl. flush surround plate Finishing colour: white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for horizontal, double socket outlet with earth pin and shutters, flush-mounting depth 28.5 mm, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. 101-66617	<p>Socket outlet with voltage indication, earth pin and shutters, screw terminals, flush-mounting depth 28.5 mm, base and finishing set white.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Socket outlet with voltage indication, earth pin, shutters, and with amber LED, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The socket outlet has a solid brass nickel-plated earth pin (pin earthing). All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <p>The socket outlet is equipped with contact buses with a large contact surface area which do not rest on the base in order to clasp and plug-in terminals with releases. These screws have combination screwheads (Pz2 slot 1x6 mm). Moreover, each screw is equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The base of the socket outlet is made of urea-formaldehyde (UF), light grey RAL7035. The base is highly heat resistant; it does not melt when exposed to high temperatures, as opposed to thermoplasts. All connection terminals are located on the top and can contain up to 4x2.5 mm<sup>2</sup> of wire; the earthing terminals can even contain up to 2x2.5 mm<sup>2</sup> + 2x4 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. The flush-mounting frame is equipped with a round cut-away, on the bottom-left directly above the groove. This opening makes the LED of the voltage indication module visible. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 1x5.5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made of 1 mm-thick metal and after cutting is galvanized on all sides, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more socket outlets can be quickly and easily carried out. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several socket outlets. The folded-up edges on the outside of the flush-mounting frame and their continuation to the inside lend an additional robustness to the frame. Vertical coupling of the socket outlets, centre distance 60 mm, is carried out by telescoping the flush-mounting frames. These are automatically locked into place. For vertical coupling of socket outlets, centre distance 71 mm, the flush-mounting frame is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this socket outlet rests perfectly on the one below and the centre distance of 71 mm is guaranteed. The 4 rectangular openings (7x2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall. The combination of a socket outlet, a voltage indication module, a central plate and a flush surround plate has a protection degree of IP41. Flush-mounting depth socket outlet with voltage indication module = 34 mm. Surface-mounting height = max. 9.2 mm. Voltage indication module has CE marking. Socket outlet is CEBC, NF approved.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Marking: CE</li> </ul> <p>Finishing set with transparent lens for socket outlet with voltage indication, earth pin and shutters, flush-mounting depth of 28.5mm. The central plate is provided with an upstanding, rectangular, transparent lens (1 x 5 mm) at the bottom left for a flush-mounting socket outlet with voltage indication module. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.2 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. 101-66625	<p>Double, horizontal socket outlet with earth pin, shutters and plug-in terminals, flush-mounting depth of 28.5 mm, incl. flush surround plate Finishing colour: white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for horizontal, double socket outlet with earth pin and shutters, flush-mounting depth 28.5 mm, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. 101-66915	<p>Socket outlet 71 x 71 mm with side earthing and plug-in terminals, base and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: ÖVE, KEMA, VDE, SEMKO</li> </ul> <p>Base for socket outlet with side earthing, flush-mounting depth 28.5 mm, 16 A/250 Vac, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. The socket outlet has side earthing in high quality brass. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Dimensions (HxWxD): 732 x 73 x 37 mm</li> <li>• Certification marks: ÖVE, KEMA, VDE, SEMKO</li> </ul> <p>Finishing set for socket outlet with side earthing and shutters, white. 101-67100	<p>Single-pole, indicator switch with 3 connection terminals, base, screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for single-pole control switch with 3 connection terminals, 10 AX/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. 101-67300	<p>Double pole 16 A control switch, base, screw terminals and finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Base for a two-pole switch, two-pole control switch or two-pole pull switch, 16 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set with lens for single switch or push button, white. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. The base material is coloured in mass.</li> <li>• Colour: white (coloured in mass, approximately RAL 9010)</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

101-67940	<p>Double, horizontal socket outlet with side earthing, shutters, plug-in terminals and screw fixing; complete device incl. flush surround plate and pre-assembled finishing set white.</p> <ul style="list-style-type: none"> <li>• Certification marks: ÖVE, KEMA, VDE, SEMKO</li> </ul> <p>Base for double socket outlet with side earthing and shutters, flush-mounting depth 28.5mm, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: ÖVE, KEMA, VDE</li> <li>• Marking: CE</li> </ul> <p>Finishing set for socket outlet with side earthing and shutters, white. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 101-69090	<p>Flush-mounted ADSL splitter white.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Flush-mounting socket ADSL splitter, claw fixing. The stripping length is around 3 mm. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Marking: CE</li> </ul> <p>Central plate ASDL - tel, white. 101-69800	<p>Single speaker connection, base and finishing set white.</p> <p>Base for single speaker connection, claw fixing. The mechanism is equipped with connection terminals with combination screwheads (Pz1 slot 0.85 x 5 mm). Each screw is also equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The two connection terminals are located on the back and can each contain up to 6 mm<sup>2</sup> of wire. On the front of the base, the red connection terminal is on the right and the black connection terminal is on the left (up to 4 mm<sup>2</sup> of wire can be connected to these terminals). When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 14.5 mm</li> </ul> <p>Finishing set for single speaker connection. 101-76801	<p>Double flush surround plate 8 x 15 cm, centre-to-centre distance 71 mm for use in cable trunking systems, Niko Original white. Double flush surround plate for two switches. The complete flush surround plate is self-extinguishing (complies with a filament test of 650°C) and halogen-free. It is made of dimensionally stable pc+asa. Flush surround plate with text field for simple marking and identification. Specially designed for cable trunking systems with a cover opening of 80 mm. Particularly suited to use in e.g. health care, retail, offices, hospitals, etc.</p> <ul style="list-style-type: none"> <li>• Colour: white (coloured in mass, approximately RAL 9010)</li> <li>• Surface-mounting height: max. 9.2 mm</li> <li>• Dimensions (HxWxD): 80 x 150 x 89 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
101-76900	<p>Blind plate, base and finishing set white.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Universal base 45 x 45 mm. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 45 x 45 mm</li> </ul> <p>Blind plate, white. 101-88000	<p>Electronic thermostat, white. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is made of rigid PC and ASA. The base material is coloured in mass. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: white (coloured in mass, approximately RAL 9010)</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

101-88001	<p>Electronic thermostat, white. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is made of rigid PC and ASA. The base material is coloured in mass. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. 102-61505	<p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, light grey. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC and ASA. 102-61900	<p>Hotel card switch, base, screw terminals and finishing set light grey.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, light grey. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. 102-88000	<p>Electronic thermostat, light grey. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is made of rigid PC and ASA. The base material is coloured in mass. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: light grey (coloured in mass)</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

102-88001	<p>Electronic thermostat, light grey. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is made of rigid PC and ASA. The base material is coloured in mass. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: light grey (coloured in mass)</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

104-61505	<p>Finishing set for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, greige. The two keys and the intermediate plate (board) form one unit. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 2 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: greige (coloured in mass, approximately NCS S5005-Y50R).</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>
104-61507	<p>Finishing set with double lens for two-circuit switch, two-way switch + N.O. push button, double two-way switch or double N.O. or N.C. push button, greige. The two keys and the intermediate plate (board) form one unit. The two buttons on the central plate are each fitted with a rectangular transparent lens (1 x 5.5 mm). This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. 104-61900	<p>Hotel card switch, base, screw terminals and finishing set greige.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, greige. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. 104-88000	<p>Electronic thermostat, greige. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: greige (coloured in mass, approximately NCS S5005-Y50R).</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

104-88001	<p>Electronic thermostat, greige. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: greige (coloured in mass, approximately NCS S5005-Y50R).</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

111-67940	<p>Double, horizontal socket outlet with side earthing, shutters, plug-in terminals and screw fixing; complete device incl. flush surround plate and pre-assembled finishing set bright white.</p> <ul style="list-style-type: none"> <li>• Certification marks: ÖVE, KEMA, VDE, SEMKO</li> <li>• Marking: CE</li> </ul> <p>Base for double socket outlet with side earthing and shutters, flush-mounting depth 28.5mm, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: ÖVE, KEMA, VDE</li> <li>• Marking: CE</li> </ul> <p>Finishing set for socket outlet with side earthing and shutters, bright white. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is made of rigid PC. 121-61900	<p>Hotel card switch, base, screw terminals and finishing set sterling.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, sterling. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled sterling</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

121-61908	<p>Hotel card switch, base, plug-in terminals and finishing set, sterling.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, plug-in terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, sterling. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled sterling</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

121-66101	<p>Finishing set for socket outlet with earth pin and shutters, flush-mounting depth 21 mm. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled sterling</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> </ul> <p>Dimensions of visible area of finishing: 45 x 45 mm (HxW)</p>

121-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled sterling</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

121-88000	<p>Electronic thermostat, sterling. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled sterling</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

122-61900	<p>Hotel card switch, base, screw terminals and finishing set anthracite.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, anthracite. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, anthracite. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled anthracite</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

122-66101	<p>Finishing set for socket outlet with earth pin and shutters, flush-mounting depth 21 mm. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled anthracite</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> </ul>

122-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled anthracite</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

122-88000	<p>Electronic thermostat, anthracite. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled anthracite</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

123-61900	<p>Hotel card switch, base, screw terminals and finishing set bronze.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, bronze. 123-76901	<p>Blind plate, bronze. To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled bronze</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>
123-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled bronze</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

123-88000	<p>Electronic thermostat, bronze. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled bronze</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

The finishing plate with text field is placed in the centre and consists of two parts. The upper part functions as a transparent lens; the lower part holds the finishing plate and label. Each finishing set is supplied with two labels. Dimensions of the label (41 mm x 12 mm). Each button on the central plate is fitted with a rectangular transparent lens. To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 4 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled dark brown</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing: 45 x 45 mm (HxW)</li> </ul>
124-60005	<p>Finishing set with lens for single switch or push button, dark brown. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled dark brown</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>
124-60050	<p>Finishing set for 6-fold potential-free push button 24 V, dark brown. The three keys (1 per 2 push buttons) are clicked onto the 6-fold, potential-free push button at the bottom and the top and are held in place by the snap hooks on the base of the potential-free push button. The back of each key is equipped with two legs that push on the push buttons of the base when the key is pressed. The finishing plate is placed in the centre and consists of two parts: a visible part and an attachment part. 124-61900	<p>Hotel card switch, base, screw terminals and finishing set dark brown.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, dark brown. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled dark brown</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> </ul>

124-76400	<p>Four-fold flush surround plate with 71 mm centre-to-centre distance Niko Intense dark brown. 4-fold flush surround plate for four switches. The complete flush surround plate is self-extinguishing (complies with a filament test of 650°C) and halogen-free. It consists of an upper frame and lower frame that are mechanically interconnected. The upperframe is made from impact-resistant, dimensionally stable polycarbonate. The upperframe is enamelled dark brown. The lower frame is made of dark grey pc + ASA.</p> <ul style="list-style-type: none"> <li>• Surface-mounting height: max. 8.5 mm</li> <li>• Dimensions (HxWxD): 83 x 296 x 8,9 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
124-76700	<p>Three-fold flush surround plate with 71 mm centre-to-centre distance Niko Intense dark brown. 3-fold flush surround plate for three switches. The complete flush surround plate is self-extinguishing (complies with a filament test of 650°C) and halogen-free. It consists of an upper frame and lower frame that are mechanically interconnected. The upperframe is made from impact-resistant, dimensionally stable polycarbonate. The upperframe is enamelled dark brown. The lower frame is made of dark grey pc + ASA.</p> <ul style="list-style-type: none"> <li>• Surface-mounting height: max. 8.5 mm</li> <li>• Dimensions (HxWxD): 83 x 225 x 8,9 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
124-76800	<p>Double flush surround plate with 71 mm centre-to-centre distance Niko Intense dark brown. Double flush surround plate for two switches. The complete flush surround plate is self-extinguishing (complies with a filament test of 650°C) and halogen-free. It consists of an upper frame and lower frame that are mechanically interconnected. The upperframe is made from impact-resistant, dimensionally stable polycarbonate. The upperframe is enamelled dark brown. The lower frame is made of dark grey pc + ASA.</p> <ul style="list-style-type: none"> <li>• Surface-mounting height: max. 8.5 mm</li> <li>• Dimensions (HxWxD): 83 x 154 x 8,9 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
124-76901	<p>Blind plate, dark brown. To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled dark brown</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>
124-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled dark brown</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

124-88000	<p>Electronic thermostat, dark brown. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled dark brown</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

154-60005	<p>Finishing set with lens for single switch or push button, white coated. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled white</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

154-61900	<p>Hotel card switch, base, screw terminals and finishing set white coated.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, white coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled white</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> </ul> <p>Dimensions of visible area of finishing: 45 x 45 mm (HxW)</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul>

154-61908	<p>Hotel card switch, base, plug-in terminals and finishing set, white coated.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, plug-in terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm.
