154-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled white</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

154-88000	<p>Electronic thermostat, white coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled white</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

To dismount simply pull the central plate off the mechanism.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 4 control buttons</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled champagne</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing: 45 x 45 mm (HxW)</li> </ul>
157-60005	<p>Finishing set with lens for single switch or push button, champagne coated. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled champagne</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

157-61900	<p>Hotel card switch, base, screw terminals and finishing set champagne coated.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, champagne coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismantling the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismantled using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled champagne</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> </ul> <p>Dimensions of visible area of finishing: 45 x 45 mm (HxW)</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul>

157-61908	<p>Hotel card switch, base, plug-in terminals and finishing set, champagne coated.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, plug-in terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. 157-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled champagne</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

157-88000	<p>Electronic thermostat, champagne coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled champagne</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

161-60005	<p>Finishing set with lens for single switch or push button, black coated. The key and the intermediate plate (board) form one unit. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. For dismounting the central plate, the flat edge is equipped with two notches indicated by a screwdriver symbol. The central plate can easily be dismounted using a slotted screwdriver.</p> <ul style="list-style-type: none"> <li>• Number of control buttons: 1 control button</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: enamelled black</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> <li>• Marking: CE</li> </ul>

161-61900	<p>Hotel card switch, base, screw terminals and finishing set black coated.</p> <ul style="list-style-type: none"> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, black coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. 161-88000	<p>Electronic thermostat, black coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled black</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: enamelled black</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

170-00090	<p>The label holder is used to identify switching material in a way that is safe and cannot be lost. Compatible with all functions on the base 60/71 and with the flush surround plates Niko Intense White with fixed transparent text field. The label holder is clicked onto the top of the base meaning it cannot get lost when the flush surround plate is removed (e.g. during painting or cleaning). The label holder is made of plastic reinforced with fibreglass (PBT). Maximum dimensions of the label: 43 x 5 mm.</p>

Article number	Specifications Text
170-00091	The paper contains self-adhesive labels to stick on the label holder. The maximum dimensions of the label are 43 x 5 mm. The manufacturer provides a label tool to quickly and efficiently print the right text on the label paper. The number of characters per label is limited to 19 (for a central plate with a single function) or 2 x 8 characters (for a central plate with a double function).
170-00096	For labelling switching material and other things. Compatible with all functions and with the three different series of flush surround plates (Original, Intense and Pure). The label holder can be positioned on the left, right, top or bottom. The label holder can be removed and repositioned. The label holder remains fixed if the flush surround plate is removed, for example, for painting or cleaning. Max. label size 6 x 42mm en max. text size Arial 16pt.
170-00099	Protection cap for painting work. The green cap is designed for use as protection during painting. It is clicked onto the function, which must already have been fitted with a central plate. The painting cap can only be used for the Niko Original, Niko Intense and Niko Pure series. The cap is made of PS and can be used three times.

All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

170-01661	<p>Base for a two-way switch or two-way pull switch 16 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. 170-02600	<p>Base for a double two-way switch, 10 AX/250 Vac, screw terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. The bottom of the base is provided with two rectangular recesses for the integration of two lighting units. A lighting unit with wires can be clicked in the left and right recess.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 40 mm</li> <li>• Marking: CE</li> </ul>
170-04900	<p>Base for 2-pole timer, adjustable up to 120 minutes, 16 A/250 Vac, screw fixing. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. 170-05905	<p>Base for roll-down shutter switch, electrically separated, 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> </ul>

170-09031	<p>Base for telephone socket outlet with 2 RJ11 contacts in parallel, screw fixing. The connection terminals have a combination screwhead (cross-slot 0.6 x 3.5 mm). The terminals are indelibly imprinted on the inside of the base. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 29.5 mm</li> <li>• Marking: CE</li> </ul>

170-09700	<p>Base for double speaker connection, claw fixing. The mechanism is equipped with connection terminals with combination screwheads (Pz1 slot 0.85 x 5 mm). Each screw is also equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The four connection terminals are located on the back and can each contain up to 6 mm<sup>2</sup> of wire. On the front of the base, the red connection terminal is on the right and the black connection terminal is on the left (up to 4 mm<sup>2</sup> of wire can be connected to these terminals). When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>
170-25915	<p>Base for roller blind push button for electronic control, 10 A/250 Vac, plug-in terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The socket outlet has a solid brass nickel-plated earth pin (pin earthing). All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall. The socket outlet is equipped with contact busses with a large contact surface area which do not rest on the base in order to clasp and plug-in terminals with releases. These screws have combination screwheads (Pz2 slot 1x6 mm). Moreover, each screw is equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The base of the socket outlet is made of urea-formaldehyde (UF), light grey RAL7035. The base is highly heat resistant; it does not melt when exposed to high temperatures, as opposed to thermoplasts. All connection terminals are located on the top and can contain up to 4x2.5 mm<sup>2</sup> of wire; the earthing terminals can even contain up to 2x2.5 mm<sup>2</sup> + 2x4 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. The flush-mounting frame is equipped with a round cut-away, on the bottom-left directly above the groove. This opening makes the LED of the voltage indication module visible. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 1x5.5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made of 1 mm-thick metal and after cutting is galvanized on all sides, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more socket outlets can be quickly and easily carried out. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several socket outlets. The folded-up edges on the outside of the flush-mounting frame and their continuation to the inside lend an additional robustness to the frame. Vertical coupling of the socket outlets, centre distance 60 mm, is carried out by telescoping the flush-mounting frames. These are automatically locked into place. For vertical coupling of socket outlets, centre distance 71 mm, the flush-mounting frame is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this socket outlet rests perfectly on the one below and the centre distance of 71 mm is guaranteed. The 4 rectangular openings (7x2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall. The combination of a socket outlet, a voltage indication module, a central plate and a flush surround plate has a protection degree of IP41. Flush-mounting depth socket outlet with voltage indication module = 34 mm. Surface-mounting height = max. 9.2 mm. Voltage indication module has CE marking. Socket outlet is CEBC, NF approved.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Marking: CE</li> </ul>

170-35900	<p>Base for pulse generator with rotary control, 25 A/250 Vac, claw fixing. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 5.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The connection terminals are located on the left and right sides of the base and can contain up to 2 x 2.5 mm<sup>2</sup> of wire (min. 0.75 mm<sup>2</sup> of wire). The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Marking: CE</li> </ul>

170-37001	The LED lighting unit (1 mA) is screwed into the front side of the E10 lamp base. The amber light is produced by an LED with very limited power consumption (0.2 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours.
170-37002	The LED lighting unit (0.5 mA) is screwed into the front side of the E10 lamp base. The blue light is produced by an LED with very limited power consumption (0.1 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours.
170-37003	The LED lighting unit (1 mA) is screwed into the front side of the E10 lamp base. The red light is produced by an LED with very limited power consumption (0.2 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours.
170-37012	The LED lighting unit is clicked into the lower-back of the base. Depending on the choice of switch, one lighting unit must be clicked into the left recess or two lighting units must be provided in the left and right recesses. The connection wires are PVC insulated. The white light is produced by an LED with very limited power consumption (20 mW). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours. The LED lighting unit can also be connected to a DC power supply. The polarity is as follows: the black wire is the - terminal and the white wire is the + terminal. In the case of a DC power supply, the LED will shine with more intensity than with AC power. Diameter of the connection wires: 0.5 mm <sup>2</sup> . The connection wires are equipped with two cable sockets for the connection of the lighting unit. CE marking.
170-37023	Seen from the front of the socket outlet, the LED lighting unit is clicked into the back of the base, with the LED in the bottom-left corner. The lighting unit is clicked onto the back of the base and in doing so is immediately connected. The following circuits are illuminated with it: single-pole, push button normal open, push button normal closed or normal open and intermediate. If the lighting unit is clicked into a two-pole switch, this results in a control function. The automatic LED lighting unit has a polyamide housing. The white light is produced by an LED with very limited power consumption (0.1 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours. The automatic lighting unit may not be combined with a lighting unit with wires. In other words, it may not be used in double switches. CE marking.
170-37024	The LED lighting unit is clicked into the lower-back of the base. Depending on the choice of switch, one lighting unit must be clicked into the left recess or two lighting units must be provided in the left and right recesses. The connection wires are PVC insulated. The white light is produced by an LED with very limited power consumption (20 mW). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours. The LED lighting unit can also be connected to a DC power supply. The polarity is as follows: the black wire is the - terminal and the white wire is the + terminal. In the case of a DC power supply, the LED will shine with more intensity than with AC power. Wire diameter of the connection wires: 0.5 mm <sup>2</sup> . The connection wires are equipped with two cable sockets for the connection of the lighting unit. CE marking.

170-37095	Seen from the front of the socket outlet, the overvoltage module is clicked into the back of the base, with the LED in the bottom-left corner. After the overvoltage module has been clicked into the back of the base, it must still be connected using 3 wires. If the red LED is illuminated, then overvoltage protection is no longer operational (the protected appliance remains live), and the overvoltage module with red LED must be replaced. The red light is produced by an LED with very limited power consumption (0.055 W when the LED is not illuminated). It is shockproof and does not radiate any heat. The connection wires of the overvoltage module are made of flexible tinned copper, are 5cm long and are insulated with PVC. Wire diameter of the connection wires: 1 mm. The rear of the overvoltage module is equipped with a Tampoprint indicating the overvoltage specifications. Uc: 250 V, Uoc: 4 kV, Up: 1.5 kV, f: 50 Hz, modes: L-L / L-PE. Short-circuit current: I <sub>cc</sub> = 1.5 kA. CE marking and CEBEC approved.
170-37096	Seen from the front of the socket outlet, the voltage indication module is clicked into the back of the base, with the LED in the bottom-left corner. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. The voltage indication module with amber LED has a polyamide housing. The amber light is produced by an LED with very limited power consumption (0.25 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning-hours. CE marking.
170-37097	Seen from the front of the base, the voltage indication module is clicked into the back of the base, with the LED in the bottom-left corner. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. The voltage indication module with green LED has a polyamide housing. The green light is produced by an LED with very limited power consumption (0.1 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning-hours. CE marking.
170-37098	Seen from the front of the base, the voltage indication module is clicked into the back of the base, with the LED in the bottom-left corner. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. The voltage indication module with red LED has a polyamide housing. The red light is produced by an LED with very limited power consumption (0.25 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning-hours. CE marking.
170-37099	Seen from the front of the base, the voltage indication module is clicked into the back of the base, with the LED in the bottom-left corner. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. The voltage indication module with blue LED has a polyamide housing. The blue light is produced by an LED with very limited power consumption (0.1 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning-hours. CE marking.
170-37100	Seen from the front of the base, the voltage indication module is clicked into the back of the base, with the LED in the bottom-left corner. The voltage indication module is clicked onto the back of the base and in doing so is immediately connected. The voltage indication module with white LED has a polyamide housing. The white light is produced by an LED with very limited power consumption (0.1 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning-hours. CE marking.
170-37123	Seen from the front of the socket outlet, the LED lighting unit is clicked into the back of the base, with the LED in the bottom-left corner. The lighting unit is clicked onto the back of the base and in doing so is immediately connected. The following circuits are illuminated with it: single-pole, push button normal open, push button normal closed or normal open and intermediate. If the lighting unit is clicked into a two-pole switch, this results in a control function. The automatic LED lighting unit has a polyamide housing. 170-37701	<p>Base for horizontal, double socket outlet with earth pin and shutters, flush-mounting depth 21 mm, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 6 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. On the horizontal axis, the grooves each have two screw holes of 7 mm so that the socket outlet can be easily mounted in a flush-mounting box. In this configuration, the screws are on the horizontal axis or in channelling systems with which the double, pre-wired socket outlet must be attached to the mounting brackets. By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>

By means of the screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box or mounting bracket and is then shifted to the desired position and screwed tight. For attachment to flush-mounting boxes where the screws are positioned on the vertical axis, the grooves are on the vertical axis, each one equipped with one screw hole. Thanks to the 7 mm screw holes, the flush-mounting frame is positioned over the screwheads of the screws of the flush-mounting box and is then shifted to the left in order to be attached in the correct position. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 21 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul>
170-37823	<p>The LED lighting unit is clicked into the lower-back of the base. Depending on the choice of switch, one lighting unit must be clicked into the left recess or two lighting units must be provided in the left and right recesses. The connection wires are PVC insulated. The green light is produced by an LED with very limited power consumption (0.2 W). It is shockproof and does not radiate any heat. The LED has a life span of min. 50,000 burning hours. Wire diameter: 0.5 mm<sup>2</sup>. The connection wires are equipped with two cable sockets for the connection of the lighting unit. CE marking.</p>

170-40161	<p>Socket for 4-fold, potential-free push button, 24V N.O. with blue LED, screw fixing. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 0.6 x 3.5mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. On its back side, the mechanism is equipped with connector blocks: one for the connection of the 4-fold, potential-free push button and one for the connection of the LEDs. The connection terminals have a terminal capacity of min. 0.5 mm and max. 0.8 mm. The base and the two LED lighting strips of the 4-fold, potential-free push button are made of polycarbonate. In addition to the 4 push buttons (upper left and right and lower left and right), the mechanism is equipped in the middle on the front with snap hooks which hold the two keys and a finishing plate (with or without text field) in place. In addition, the mechanism is also equipped with two LED lighting strips. When the LEDs are connected, the 2 uppermost and the 2 lowermost standing studs are illuminated. The LEDs can be connected as indicators or as feedback. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> </ul>
170-40170	<p>Base for 4-fold, potential-free push button, 24V N.O. with white LEDs, claw fixing. The connection terminals have a combination screwhead (cross-slot 0.6 x 3.5 mm). On its back side, the mechanism is equipped with connector blocks: one for the connection of the 4-fold, potential-free push button and one for the connection of the LEDs. The connection terminals have a terminal capacity of min. 0.5 mm and max. 0.8 mm. The base and the two LED lighting strips of the 4-fold, potential-free push button are made of polycarbonate. The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> </ul>

Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> </ul>
170-60160	<p>Base for 6-fold, potential-free push button, 24 V N.O. with blue LED, claw fixing. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 0.6 x 3.5mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. On its back side, the mechanism is equipped with connector blocks: one for the connection of the 4-fold, potential-free push button and one for the connection of the LEDs. The connection terminals have a terminal capacity of min. 0.5 mm and max. 0.8 mm. The base and the two LED lighting strips of the potential-free push button are made of polycarbonate. In addition to the 6 push buttons, the mechanism is equipped in the middle on the front with snap hooks which hold the keys in place. In addition, the mechanism is also equipped with two LED lighting strips. When the LEDs are connected, the 6 standing studs are illuminated. The LEDs can be connected as indicators or as feedback. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <p>• Dimensions (HxWxD): 45 x 45 mm</p>

The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 45 x 45 mm</li> </ul>
170-65214	<p>2 RJ11-connections UTP, flat model, incl. flush-mounting frame 60 x 71 mm with screw fixing.</p> <p>Universal base 45 x 45 mm. When fixing in a flush-mounting box screws should be used. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 45 x 45 mm</li> </ul>

170-65272	<p>2 RJ45-connections UTP cat. 6A, flat model, incl. base 60 x 71 mm with screw fixing.</p> <ul style="list-style-type: none"> <li>• Marking: CE</li> </ul> <p>Universal base 45 x 45 mm. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> </ul>

170-67051	<p>Socket for 6-fold, potential-free push button, 24V N.O, screw fixing. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 0.6 x 3.5mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. On its backside, the mechanism is equipped with one connector block for the connection of the potential-free push button. The connection terminals have a terminal capacity of min. 0.5 mm and max. 0.8 mm. The base and the two LED lighting strips of the potential-free push button are made of polycarbonate. In addition to the 6 push buttons, the mechanism is equipped in the middle on the front with snap hooks which hold the keys in place. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. 170-70000	<p>Base for N.O. push button with 3 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>

170-71215	<p>Base for a two-pole switch, two-pole control switch or two-pole pull switch, 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>

At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
170-71615	<p>Base for a two-way switch or two-way pull switch 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). 170-72205	<p>Base for a two-pole two-way switch, 10 AX/250 Vac, plug-in terminals. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 28.5 mm</li> <li>• Certification marks: CEBEC, NF</li> </ul>
170-73115	<p>Base for socket outlet with pin earthing and shutters, flush-mounting depth 28.5 mm, 16 A/250 Vac, plug-in terminals. The sockets are equipped with plug-in terminals for clamping the wires. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p>

The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p>

For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
170-77101	<p>Base for single-pole control switch with 3 connection terminals, 10 AX/250 Vac, screw terminals. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 29.5 mm</li> <li>• Marking: CE</li> </ul>
170-79501	<p>Base for 2x single coax connection for TV and FM, screw fixing. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>

170-95900	<p>Base for roller blind push button for electronic control, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. 200-61900	<p>Hotel card switch, base, screw terminals and finishing set Bakelite® piano black coated.</p> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, Bakelite® piano black coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: Bakelite®-look piano black coated (approximately RAL9005). 200-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: Bakelite®-look piano black coated (approximately RAL9005). 200-88000	<p>Electronic thermostat, Bakelite® piano black coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: Bakelite®-look piano black coated (approximately RAL9005). Bakelite® is a registered trademark of Hexion GmbH.</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

220-61900	<p>Hotel card switch, base, screw terminals and finishing set alu grey coated.</p> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, alu steel grey coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: alu-look steel grey</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> </ul> <p>Dimensions of visible area of finishing: 45 x 45 mm (HxW)</p>

220-88000	<p>Electronic thermostat, alu steel grey coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: alu-look steel grey</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> <li>• Marking: CE</li> </ul>

221-61900	<p>Hotel card switch, base, screw terminals and finishing set alu gold coated.</p> <p>N.O. or N.C. push button with 4 connection terminals, 10 A/250 Vac, screw terminals. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz1 or slot 1 x 5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also provided with a fourth, additional connection terminal for connection of a lighting unit. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected.</p> <p>When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz1 or slot 1 x 5 mm). The claws, which have a depth of engagement of 31 mm, can be manually pushed back into their original position after unscrewing. These claws can also be easily pushed out using a screwdriver. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The 4 rectangular openings (7 x 2.5 mm) in the flush-mounting frame can compensate for a margin of 1 to 1.2 mm if the flush-mounting box protrudes beyond the plasterwork. In the case of such a margin, the flush surround plate can still butt up perfectly against the wall.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 18 mm</li> <li>• Certification marks: CEBEC, NF</li> <li>• Marking: CE</li> </ul> <p>Finishing set for hotel card switch, alu gold coated. First, the intermediate plate is clicked onto the mechanism. Afterwards, the central plate is clicked onto the mechanism. The central plate is also equipped with a window and has a slot for a hotel card. Suitable cards: width: min. 45 mm / max. 60 mm, thickness: min. 0.75 mm / max. 1.2 mm. The key on the push button is fitted at the bottom with a small amber-coloured LED (1.5 x 1.5 mm) to indicate the status of the action. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. 221-77001	<p>Finishing set for a 1-channel flush-mounting RF receiver with single-pole (potential-free) switching contact or flush-mounting RF receiver with roller blind function. This flat blank plate is used for RF receivers and can be clicked directly into a 45 x 45 mm flush-mounting frame. An opening is provided for pressing the programming key. This central plate is surrounded with a flat edge that is equipped at all 4 corners with a rectangular opening, each containing a multi-positional snap hook. The construction of the central plate ensures that the flush-surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The flat edge around the central plate also has 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. After mounting all components (flush surround plate, finishing set and switch), no metal parts are visible thanks to the flat edge of the central plate. To dismount simply unscrew the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Material central plate: The central plate is enamelled and made of rigid PC and ASA.</li> <li>• Colour: alu-look gold</li> <li>• Impact resistance: After mounting, an impact-resistance of IK06 is guaranteed.</li> <li>• The plastic parts of the central plate are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Dimensions of finishing with flat edge: 56 x 56 mm (HxW)</li> <li>• Dimensions of visible area of finishing: 45 x 45 mm (HxW)</li> </ul>
221-88000	<p>Electronic thermostat, alu gold coated. This electronic analogue thermostat controls the central heating as well as the electric heating or air conditioning. There are 2 operational modes, heating and air conditioning, and 3 different status modes: on and day mode, eco and night mode and standby mode. The thermostat is designed for flush mounting into a wall or partition. With this thermostat, the temperature can be regulated from +5°C to +30°C. You can set a minimum and a maximum temperature so that, for example, the temperature can only be adjusted between +15°C and +25°C. The setting key has a scale indicating the temperature in steps of 5 °C. In the bottom left corner there is a 3-position switch indicating an off button, daytime setting (sun) and night-time setting (moon).</p> <p>The central plate is enamelled and made of rigid PC and ASA. 5 connection terminals 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal. The sockets are equipped with screw terminals for clamping the wires. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When mounting in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a slotted screwhead (slot 0.8 x 5 mm). The claws, which have a depth of engagement of 31 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: alu-look gold</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> </ul>

The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed.</p> <ul style="list-style-type: none"> <li>• Colour: alu-look gold</li> <li>• Adjustment range: +5 °C to +30 °C</li> <li>• Accuracy: +/- 1 °C</li> <li>• Hysteresis: 1 °C</li> <li>• Flush-mounting height: recommended at 1.5 m</li> <li>• Flush-mounting depth: 40 mm minimum depth of the flush-mounting box</li> <li>• Minimum ambient temperature: 0 °C</li> <li>• Maximum ambient temperature: +50 °C</li> <li>• Ambient temperature during storage and transport: -20 to +60 °C</li> <li>• Protection degree: IP21 (designed for use in an environment with non-condensing humidity)</li> </ul>
241-76005	<p>Five-fold flush surround plate with 71 mm centre-to-centre distance Niko Pure liquid snow white. 5-fold flush surround plate for five switches. The complete flush surround plate is self-extinguishing (complies with a filament test of 650°C). It consists of an upper frame and lower frame that are mechanically interconnected. The upperframe is made of hard-coated PMMA. The underframe is made from white PC + ASA. The upper frame is 2 mm thick and the underframe 6 mm.</p> <ul style="list-style-type: none"> <li>• Surface-mounting height: max. 8.5 mm</li> <li>• Dimensions (HxWxD): 83 x 367 x 8,9 mm</li> <li>• Marking: CE</li> </ul>

The complete flush surround plate is halogen-free. It consists of an upper frame and lower frame that are mechanically interconnected. dark bamboo on gold The lower frame is made of dark grey pc + ASA. The upper frame is 6 mm thick and the underframe 2 mm.</p> <ul style="list-style-type: none"> <li>• Surface-mounting height: max. 8.5 mm</li> <li>• Dimensions (HxWxD): 83 x 154 x 8,9 mm</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, VDE, NF, SEMKO</li> <li>• Marking: CE</li> </ul>
410-00001	<p>Base for wireless switch with 2 control buttons. Wall-mounted transmitter with 2 connections with RF technology for wireless remote control of Niko RF receivers on the frequency 868.3MHz. Each transmitter can control an unlimited number of receivers. Each receiver can be controlled by a maximum of 32 transmitters. Minimum transmission range in a building: 30m; in open spaces: 100m. Modulation type: FSK. Supplied complete with battery and pre-programmed transmitter address. Buttons and flush surround plates are to be ordered separately. Battery type: Renata 3V/270mAh CR2430; Saft 3V/270mAh LM2430; Varta 3V/260mAh CR2430; Panasonic 3V/250mAh CR2330. Can be either stuck or screwed to the wall or flush-mounting box. In compliance with Belgian and European legislation: CE marking on the device. Complies with the EN60669-2-1 standard, the EC legislation and meets the essential requirements of the R&amp;TTE Directive 1999/5/EC. Can be used in all European Member States. User manual is included.</p> <ul style="list-style-type: none"> <li>• Dimensions (HxWxD): 71 x 103 mm</li> <li>• Marking: CE</li> </ul>

410-00021	Base for the mounting of a wireless switch on a flush-mounting box, claw fixing.
410-00022	Base for the mounting of a wireless switch on a flush-mounting box, screw fixing. When fixing in a flush-mounting box screws should be used.

Article number	Specifications Text
420-00100	<p>10A, 230V base with switch contact for digital timer or digital clock thermostat with intelligent control. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 1 x 4.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup> per connection terminal When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Flush-mounting depth: 40 mm</li> <li>• Marking: CE</li> </ul>

420-00511	<p>Dual smart USB-A charger, screw fixing. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 1 x 4.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. When fixing in a flush-mounting box screws should be used. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ...) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. At the right and left sides, the flush-mounting frame is equipped with folded-up dovetails, allowing for a quick and perfect horizontal coupling of several switches. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. The bases can be coupled vertically with a centre-to-centre distance of 60 x 71 mm by sliding them into each other. They automatically lock into place. For horizontal coupling of bases with a centre-to-centre distance of 71 mm, the base is equipped with two pre-formed lips at the bottom. By folding these lips down over a length of 1 mm, this rests perfectly on the one below and the centre-to-centre distance of 71 mm is guaranteed. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate.</p> <ul style="list-style-type: none"> <li>• All plastic components are self-extinguishing (comply with a filament test of 650°C) and are halogen-free.</li> <li>• Protection degree: The combination of a mechanism, a central plate and a flush surround plate has a protection degree of IP41</li> <li>• Dimensions (HxWxD): 71 x 398 mm</li> <li>• Marking: CE</li> </ul>

420-00512	<p>Dual smart USB-A and USB-C charger, base 60x71, claw fixing. The smart USB charger comprises a module of 45 x 45 x 42 mm (HxWxD) that is clicked into a metal flush-mounting frame with an opening of 45 x 45 mm by way of two snap hooks. The module is fitted with two screw terminals (2 x 2.5 mm<sup>2</sup>). There are two holes on the rear of the module for screwing on the terminals of the connector. The module can be supplied with 100 - 240 V AC ± 10% with a mains frequency of 50 - 60 Hz. On its front side, the module is equipped with two USB connectors onto which a wire with a type A connector can be connected. It has a charging behaviour which complies with the IEC62694 standard. It is possible to charge two mobile devices simultaneously. The maximum output current is 3500 mA, distributed over the two USB connectors at an ambient temperature of 35°C. When there are no devices connected to the USB output, the module has a stand-by consumption of maximum 0.1 W. A finishing set can be mounted on the module with two snap hooks. The housing of the module consists of two parts which are clicked to one another in five places. The USB charger complies with overvoltage category III and EN60950-1 and EN301489-34 standards. Each connector block is equipped with cage clamps with permanent screws. The screws have a slotted screwhead (slot 1 x 4.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. When mounting the socket outlet in a flush-mounting box with grip surfaces, use claws that can be rotated open using screws with a combination screwhead (Pz2 or slot 1 x 5.5 mm). The claws, which have an engagement depth of 23.5 mm, turn back completely when loosened. The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. 550-13061	<p>HVAC-thermostat Niko Home Control. The HVAC thermostat allows you to control the air conditioning system (HVAC system) within a zone or room. The HVAC thermostat and the air conditioning system communicate via an HVAC interface (CoolMaster). The HVAC thermostat can be operated locally or remotely via a touchscreen, smartphone or tablet. Each HVAC thermostat can be programmed independently. There are three adjustable temperature settings (DAY, NIGHT and CUSTOM) and two weekly programmes to choose from. You can use the pre-programmed settings or enter your personal settings. Each temperature setting has two values depending on the operating mode that has been activated (COOLING or HEATING). In addition, there are three status options (ECO, PROTECT and ON/OFF) as well as the option to enter the temperature of your choice. Statuses ECO and PROTECT cannot be selected via the HVAC thermostat. Using the HVAC thermostat function, you can:</p> <ul style="list-style-type: none"> <li>• select one of the temperature settings or pre-programmed weekly programmes.</li> <li>• modify temperature settings.</li> <li>• modify weekly programmes.</li> <li>• modify the temperature setting for a certain length of time.</li> <li>• set the date and time.</li> <li>• change the ventilation speed.</li> <li>• Change the operating mode (cooling or heating).</li> <li>• switch off all indoor units within the zone.</li> </ul> <p>An HVAC thermostat can be mounted in any room fitted with indoor units of the HVAC system. It controls the heating or cooling for the room in which it is mounted. The HVAC thermostat only functions properly when the temperature within the room can be measured accurately. Try to eliminate as many factors as you can that may inhibit the thermostat's ability to accurately control the room temperature.</p> <p>DO NOT mount the HVAC thermostat:</p> <ul style="list-style-type: none"> <li>• in direct sunlight.</li> <li>• on an exterior wall.</li> <li>• within the immediate vicinity of a heat generating source (heater, radiator, etc.) or electrical equipment that may radiate heat (TV, computer, etc.).</li> <li>• behind a curtain.</li> <li>• Compatible with the Niko Home Control solar mode</li> </ul> <p>Do not allow air to circulate behind the HVAC thermostat. If needed, fill in any gaps in the flush-mounting box or bus cable duct using PU foam. Push buttons with display are integrated in a bridge. The thermostat conforms to IEC60730-2-9, EN 50491-5-2, EN 50491-2 and EN 50090-2-3 The flush-mounting frame is made from 1 mm-thick metal which is galvanized on all sides after cutting, even on the cut edges. On the horizontal and vertical axes, the flush-mounting frame has 4 grooves for screw mounting in flush-mounting boxes. These grooves have a screw aperture of 7 mm. For mounting on panels, the flush-mounting frame is equipped with 4 screw holes (indicated by a screw symbol) with a diameter of 3 mm. The middle of the flush-mounting frame is indicated (chalk line, laser, ..) in both the horizontal and vertical directions, so that mounting one or more mechanisms can be carried out quickly and easily. The flush-mounting frame is equipped, both on the top and the bottom, with a dark grey, plastic end border. This border is made of PC+ASA and is joined to the flush-mounting frame using a melting process. The corners of the two end borders are equipped with rectangular openings (7.9 x 1.5 mm) each containing a multi-positional snap hook. Thanks to the snap hooks, the 4 rectangular openings ensure that the flush surround plate can always be attached flat to the wall, even in cases of untidy plasterwork. This works in two directions: If the flush-mounting box sticks out of the plasterwork, the multi-positional snap hooks can compensate for a 1 to 1.2 mm margin; if the flush-mounting box is sunk too deeply in the plasterwork, the snap hooks can compensate for up to a 1.8 mm margin. The end borders also have 4 round openings that ensure the correct positioning of the flush surround plate in relation to the central plate. The base is equipped on all sides with folded-up dovetails, allowing for both vertical and horizontal coupling (centre-to-centre distance of 71 x 71 mm) of several bases to be carried out quickly and perfectly. The folded-up edges on the outside of the base and their continuation to the inside ensure additional robustness. When fixing in a flush-mounting box screws should be used.</p> <ul style="list-style-type: none"> <li>• Flush-mounting depth: 20 mm</li> <li>• Screen type: lit colour display with the dimensions 45 x 45 x 32 (HxWxD)</li> <li>• Minimum ambient temperature: +5 °C</li> <li>• Maximum ambient temperature: +40 °C</li> <li>• Input voltage: 26 Vdc (SELV, safety extra-low voltage)</li> <li>• Marking: CE</li> </ul>

700-30000	<p>Splashproof, illuminable push button 10 A/250 Vac with transparent window, screw terminals and a N.O. or N.C. contact, excluding surface-mounting box, grey. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The mechanism is equipped with connection terminals with combination screwheads (Pz1 slot 0.85 x 5 mm). Each screw is also equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. At the bottom left, the key is fitted with a square, transparent lens (6.7 x 6.7 mm) for switches or push buttons that are equipped with a lighting unit. The function is designed to be mounted in a splashproof, surface-mounting box. The function has an integral closure and is hermetically sealed onto the appropriate box.</p> <p>Cable space: Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 21.9 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The switch/push button is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The switch is light grey RAL 7035 (NCS S1502-B) and the control button is dark grey (NCS S3502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>

The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The switch is light grey RAL 7035 (NCS S1502-B) and the control button is dark grey (NCS S3502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-35905	<p>Splash proof surface-mounting roll-down shutter switch 10 AX/250 Vac, mechanically locked and galvanically isolated; does not include surface-mounting box, with plug-in terminals, grey. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. Two keys with 'start', 'stop' and two arrows indelibly imprinted. On the left key, 'stop' is indicated at the top, 'start' at the bottom. On the right key, an arrow pointing upwards is indicated at the top, an arrow pointing downward at the bottom. The sockets are equipped with plug-in terminals with a release for clamping the wires. The releases can be controlled from the front side by hand or with a screwdriver. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. The function is designed to be mounted in a splashproof, surface-mounting box. The function has an integral closure and is hermetically sealed onto the appropriate box.</p> <p>Cable space: Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 21.9 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The switch/push button is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The switch is light grey RAL 7035 (NCS S1502-B) and the control button is dark grey (NCS S3502-B).</li> <li>• Marking: CE</li> </ul>

The cover has an integral closure and is hermetically sealed onto the appropriate box. The switch/push button is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The switch is light grey RAL 7035 (NCS S1502-B) and the control button is dark grey (NCS S3502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-37605	<p>Splashproof, 2-pole two-way control switch 10 AX/250 Vac with transparent window and with plug-in terminals, excluding surface-mounting box and lighting elements. The switch is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The sockets are equipped with plug-in terminals with a release for clamping the wires. The releases can be controlled from the front side by hand or with a screwdriver. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. The function is designed to be mounted in a splashproof, surface-mounting box. The function has an integral closure and is hermetically sealed onto the appropriate box.</p> <p>Cable space: Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 21.9 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The switch/push button is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The switch is light grey RAL 7035 (NCS S1502-B) and the control button is dark grey (NCS S3502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>

700-38800	<p>Splashproof key switch 16 A with screw terminals, excluding surface-mounting box, grey. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The cover has an integral closure and is hermetically sealed onto the appropriate box.</p> <ul style="list-style-type: none"> <li>• Input voltage: 230 Vac ± 10 %, 50 Hz</li> <li>• Maximum load: 3680 W</li> <li>• Halogen-free</li> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Ambient temperature: -25 – +70 °C</li> <li>• Dimensions (HxWxD): 727 x 727 x 665 mm</li> <li>• Marking: CE</li> </ul>
700-73000	<p>Single flush-mounting frame for flush-mounting a splashproof surface-mounting function, grey. The surface-mounting box is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm).</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The entire unit consisting of the flush-mounting frame and the surface-mounting function has a protection degree of IP55.</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-74000	<p>Double vertical flush-mounting frame, grey.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The entire unit consisting of the flush-mounting frame and the surface-mounting function has a protection degree of IP55.</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-75000	<p>Double horizontal flush-mounting frame, grey.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The entire unit consisting of the flush-mounting frame and the surface-mounting function has a protection degree of IP55.</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-83101	<p>Splashproof surface-mounting box with two single flexible inputs for flush-mounting one function, grey. The surface-mounting box is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm).</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The entire unit consisting of the flush-mounting frame and the surface-mounting function has a protection degree of IP55.</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-83201	<p>Splashproof double vertical surface-mounting box with two single flexible inputs for flush-mounting two functions, grey. The surface-mounting box is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm).</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The entire unit consisting of the flush-mounting frame and the surface-mounting function has a protection degree of IP55.</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, light grey (RAL 7035 or NCS S1502-B).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>
700-84000	<p>Robust blind plug M20 x 1.5 made of light grey polystyrene with pre-mounted O-ring (IP55). This plug is screwed into the unused inlets M20 of surface-mounting sockets. CE marking.</p>
700-84001	<p>Robust, plastic cable gland M20 x 1.5 made of light grey polyamide in a blind nut construction for the moisture- and dust-proof introduction of cables into splashproof surface-mounting sockets (IP55). The outside diameter of the cable is minimum 6 mm and maximum 13 mm. CE marking.</p>

701-30000	<p>Splashproof, illuminable push button 10 A/250 Vac with transparent window, screw terminals and a N.O. or N.C. contact, excluding surface-mounting box, white. The push button is equipped with block-shaped, silver contacts (cadmium-free) in the form of a cross. The mechanism is equipped with connection terminals with combination screwheads (Pz1 slot 0.85 x 5 mm). Each screw is also equipped with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. The mechanism is also equipped with a third, additional connection terminal for the connection of a lighting unit. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (8 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. At the bottom left, the key is fitted with a square, transparent lens (6.7 x 6.7 mm) for switches or push buttons that are equipped with a lighting unit. The function is designed to be mounted in a splashproof, surface-mounting box. The function has an integral closure and is hermetically sealed onto the appropriate box.</p> <p>Cable space: Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 21.9 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The switch/push button is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The control button is made of rigid ABS.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 1</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, white (RAL 9010).</li> <li>• Certification marks: CEBEC, ÖVE, KEMA, NF</li> <li>• Marking: CE</li> </ul>

All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 15.7 mm of wiring space remaining under the mechanism.</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Colour: The base material is coloured in mass, white (RAL 9010).</li> <li>• Certification marks: CEBEC, NF</li> </ul>
701-37842	<p>Splashproof, vertical, double surface-mounting socket outlet 16 A/250 Vac with shutters and pre-wired – includes box with one M20 input with cable gland, screw terminals, white. Each socket outlet is covered entirely by a hinged protection cap which opens upward. A spring and a hook-fastener keep the protection cap tightly closed. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 5.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 12.7 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The box is made of impact-resistant, dust-preventing, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The protection cap is made of rigid ABS. The socket outlet has side earthing in high quality brass.</p> <p>The socket outlets are mounted in a double, vertical, splashproof, surface-mounting box with one M20 inlet for the flush-mounting of two devices. The socket is supplied with one M20 cable gland. Each socket outlet has an integral closure and is hermetically sealed onto the double box. The fixation points of this double, vertical box are situated 120 mm apart on a vertical axis. This size indication is indelibly imprinted on the bottom of each box. The oval screw openings allow for imprecise drilling. By forming a pressure lock, a gasket ensures the protection degree and the double insulation. The box contains two diagonal, knock-out condensation openings. The surface-mounting box is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm).</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, white (RAL 9010).</li> <li>• Certification marks: ÖVE, KEMA</li> </ul>

761-35915	<p>Splash proof surface-mounting roll-down shutter push-button 10 A/250 Vac, mechanically locked and galvanically isolated; does not include surface-mounting box, with plug-in terminals, black. Two keys with two indelibly imprinted arrows. On the left key, an arrow pointing upwards is indicated at the bottom, on the right key, an arrow pointing downward is indicated at the bottom. The sockets are equipped with plug-in terminals with a release for clamping the wires. The releases can be controlled from the front side by hand or with a screwdriver. All connection terminals can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. At the bottom, the base is equipped with rectangular recesses for integration of a lighting element. A lighting element with wires or an automatic lighting unit can be clicked in the left recess (front view). At the back, the base is equipped with round recesses that ensure that the automatic lighting element makes direct contact with the mechanism when being clicked in and, in this way, is immediately connected. The function is designed to be mounted in a splashproof, surface-mounting box. The function has an integral closure and is hermetically sealed onto the appropriate box.</p> <p>Cable space: Two laterally positioned holders inside the outlet hold the mechanism in place. 761-37735	<p>Splashproof, vertical, double wall socket with earth pin, shutters and plug-in terminals; incl. surface-mounting box with two inlets on the upper side black. Each socket outlet is covered entirely by a hinged protection cap which opens upward. A spring and a hook-fastener keep the protection cap tightly closed. The sockets are equipped with plug-in terminals with a release for clamping the wires. The releases can be controlled from the front side by hand or with a screwdriver. All connection terminals are located at the top of the end socket and can contain up to 2 x 2.5 mm<sup>2</sup> of wire. The stripping length (12 mm) of the wires and the wiring diagram are indelibly indicated at the back of the base. The terminals and the switch symbol are indelibly indicated at the front. Two laterally positioned holders inside the outlet hold the mechanism in place. A snap connector holds the wired mechanism in place. There is 15.7 mm of wiring space remaining under the mechanism. The cover has an integral closure and is hermetically sealed onto the appropriate box. The box is made of impact-resistant, dust-preventing, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm). The protection cap is made of rigid ABS. The socket outlet has a solid brass nickel-plated earth pin (pin earthing). The socket outlets are mounted in a double, vertical, splashproof, surface-mounting box with two M20 inputs on the top and bottom for the flush-mounting of two devices. The socket is supplied with 2 M20 cable glands and 1 M20 blind plug. Each socket outlet has an integral closure and is hermetically sealed onto the double box. The fixation points of this double, vertical box are situated 120 mm apart on a vertical axis. This size indication is indelibly imprinted on the bottom of each box. The oval screw openings allow for imprecise drilling. By forming a pressure lock, a gasket ensures the protection degree and the double insulation. The box contains two diagonal, knock-out condensation openings. The surface-mounting box is made of impact-resistant, dust-resistant, halogen-free and self-extinguishing polypropylene (UL94-V2/1.6 mm).</p> <ul style="list-style-type: none"> <li>• Number of mechanisms: 2</li> <li>• Protection degree: The combination of a Hydro mechanism + flush or surface mounting box has a protection degree of IP55</li> <li>• Impact resistance: After mounting, an impact-resistance of IK07 is guaranteed.</li> <li>• Colour: The base material is coloured in mass, black (RAL 9005).</li> <li>• Certification marks: CEBEC, NF</li> </ul>
761-37748	<p>Splashproof, horizontal double wall socket with earth pin, shutters and screw terminals; includes box with one inlet on the upper side black. Each socket outlet is covered entirely by a hinged protection cap which opens upward. A spring and a hook-fastener keep the protection cap tightly closed. The sockets are fitted with cage clamps with permanent screws. These screws have combination screwheads (Pz2 or slot 1 x 5.5 mm). Moreover, every screw is provided with a screwdriver slot that prevents the screwdriver from sliding off the screwhead. All connection terminals are located at the top of the end socket and can contain up to 4 x 2.5 mm<sup>2</sup> of wire. The earthing terminal even up to 2 x 2.5 mm<sup>2</sup> + 2 x 4 mm<sup>2</sup>. The stripping length (14 mm) of the wires is indelibly imprinted on the back of the base. Two laterally positioned holders inside the outlet hold the mechanism in place.
