

IR remote control

350-20089

This remote control is used for setting the presence or absence detectors (360°, 230 V, master) with one channel for flush mounting and for surface mounting via infrared transmission. The remote control allows the factory settings to be changed, including the daylight factor (lux value) and the time period during which the lighting remains on.

Compatible articles: 350-20070, 350-20078, 350-20080, 350-20082

Technical data

IR remote control

This Niko remote control is used for setting the presence or absence detectors (360°, 230 V, master) with one channel for flush mounting (350-20070) and for surface mounting (350-20078) via infrared transmission. The factory settings can be changed with the remote control. The settings that can be changed include the daylight factor (lux value) and the time period during which the lighting remains on.
