

# Niko Home Control Partnerships

***niko***

Niko understands that a building is merely a collection of windows, bricks and bits until it becomes yours. And that it's only when you've added your touch and your personality that it really becomes **your home, your office, yours.**

We appreciate that everyone has a different idea about what they want their place to be like. And how they want it to work best for them. If you are looking for intuitive and useful technology that works, and want functional rather than gadget-inspired equipment, then you can trust Niko to deliver.

## Niko gives you complete control over your home

Niko Home Control can ensure your home works optimally for you.

The beauty of the Niko ecosystem is that it will grow with you and take on board new equipment you may acquire, so that in the end you are able to manage your energy, your safety and your well-being perfectly.

## Niko Home Control fits every home

It doesn't matter what type of home you live in, nor how old it is, nor what sort of electricity system you have ... but if you have electricity, you can:

- Control all your devices with just one switch - and not worry that your lights (and oven) are still on when you're away
- Automatically roll your electric blinds and shades up and down - either at a particular set time or when the weather conditions require it
- Use voice activation like Amazon Alexa or Google Assistant to switch and dim lights, activate an alarm and control the temperature

## Niko Home Control evolves, just like you

Make sure that the decisions you take today are also good for tomorrow.

Based on open source technology, Niko Home Control is a future-proof home automation system that can be extended as and when required: when your life situation changes (bigger/smaller family or when you get older), when your budget allows it, or when technology evolves.

## Keep your cool when your hands are full

Use voice activation like Amazon Alexa or Google Assistant to switch and dim lights, activate alarm settings and control the temperature.

### All you have to do is ask

Niko Home Control now seamlessly connects with the voice control solutions Google Assistant and Amazon Alexa for true, hands-free control of your home's electrical installation.

Simply say the word and Niko Home Control will do just about anything you ask it.

## Some of the most popular routines

Good morning

All-off (leaving the house)

Dinner scene

Movement detection at your front door

Cosy scene

Movement detection at your  
parent's house

## Take your sound system to a new level

With just one press of the button, you not only put on the lights at the right level and turn the ventilation up or down, you also activate the music from your favourite playlist when you arrive home. You can use the all-off button to e.g. turn off your sound system and lights when you go out.

Is someone at the door? In order to ensure that you don't miss the doorbell, the volume immediately goes down when the doorbell rings. Unwelcome visitors? Your audio system puts your music on extra loud to frighten them away.

## Open and close windows and sun blinds automatically

**Operate your roof windows, electrical sliding windows and sun blinds using Niko Home Control.**

The built-in sensor in your roof or sliding window allows you to check on your smartphone whether you have closed the window. It also closes automatically when it starts to rain. With your smartphone you can open the sliding door remotely to let someone in or out.

Using your touchscreen or smartphone, you can open up roof windows and let in some fresh air. In the winter, your roll-down shutters and curtains stay open to let in the sun's warmth. And in the summer, they automatically close to keep the heat at bay. That saves you energy. Switching your home to sleep mode? Your curtains will also close automatically.

## Use your heat / cooling system where and when necessary

Thanks to Niko Home Control, you can now also monitor your heating, cooling and hot water from one central location. You can control all essential heating system functions, and do this remotely too.

Your living room is used at different times from your kitchen or bathroom. After school, your children may play or study in their bedrooms. With Niko Home Control, you heat each room in your home only when it's necessary.

## Optimise the ventilation in your home

Optimise the ventilation in your home. On the Niko Home Control touchscreen and your smartphone, you can monitor just how healthy the air in your home is and how much CO<sup>2</sup> is present. You can rapidly adjust the ventilation level in one or more rooms or briefly put your ventilation on 'boost'.

Do you wish to automatically decrease your ventilation at bedtime? Or activate economy mode while you spend a weekend at the coast? It's all possible. Thanks to smart ventilation, your ventilation will only work when it's necessary. This stops you from wasting energy.

## Optimise your energy efficiency

Get grip on your energy usage, have insights in which devices consume the most, receive alerts and make adjustments where needed.

Automate your energy usage. Thanks to the solar production insights, you can automatically match your consumption to your production and spread your usage over the entire day.

Our energy provision is changing rapidly. Energy is being produced in a much more sustainable way and we must reduce our CO<sup>2</sup> emissions more and more. By using smart switches for lighting, heating, socket outlets, ventilation and other installations, Niko Home Control ensures that you have the lowest possible energy consumption. This is good for the environment and for your wallet.

Niko designs electr(on)ic solutions to enhance buildings to better suit the needs of the people who live and work in them. By using less energy, by improving light comfort and safety and by making sure all applications work together seamlessly. Buildings with Niko are more efficient, are controllable from a distance and interact within bigger ecosystems. Niko is a Belgian family business from Sint-Niklaas with 700 employees and 10 European branches.

At Niko, there is one question that keeps us busy every day: "How can we enhance buildings to better suit your needs?"
