

Tilslutning

System

Med traditionel armaturer 1-10V

Teknisk data

Input:

Forsyningsspænding 230VAC 50Hz ±10%
Effektforbrug..... <3W

Output:

Relækontakt NO, μ 10 A
Belastning
Glødelamper 2300 W
Lysrør ukompenseret 1200 VA
Halogenglødelamper 2300 W
Max. kompensations kapacitet.... 140μF
Sparelamper 58 stk. (18W)
Max. indkoblings Peak 80 A / 20 m sek.
DIM 1 - 10V / max. 50mA

Performance:

Modtager Trådløs 2,4GHz
RF-rækkevidde 30 meter
Kapslingsgrad IP 20
Isolationsklasse Klasse II
Omgivelsestemperatur -5°C...+50°C

Godkendelse:

CE iht..... EN60669-2-1

Lyssensor
43-197

Luxstat wireless control

Luxstat Cut-off control 1-10V 79-210

Use

The Luxstat Cut-off control 1-10V is part of the Luxstat wireless lighting control system concept.

The Luxstat Wireless Control (79-050) controls the wireless Luxstat Cut-off control, which controls light fittings equipped with ballast designed for 1-10 V control.

The light in the light fittings can be controlled in respect to incident daylight. One or more movement sensors can be included in the control as well as wireless pushbuttons for manual operation such as On/Off and dimming of the lighting.

The Luxstat wireless lighting control system is installed locally in the individual rooms. The system is based on wireless communication between operation, movement sensors and the Luxstat Cut-off control, so wiring is kept to a minimum.

Light fittings are connected to 230 V and to 1-10 V directly on the Luxstat Cut-off control.

All the wireless pushbuttons are of the same type and do not require either a voltage supply or batteries.

You can implement the system via an easy-to-use Windows start-up software application.

You can select various applications using this basic start-up software:

- Use the pushbutton to switch on/off all the lighting manually. It switches off automatically via the movement sensor.
- Use the movement sensor to switch on/off all the lighting automatically, with the option of switching it on/off manually and dimming it using the pushbuttons.
- Individually switch on/off three lights manually; switch off all three lights automatically via a movement sensor.
- Individually switch on/off three lights manually; each light is automatically switched off individually via the three movement sensors installed in the relevant area for each light.

You have the option to choose other applications and change parameters using the Service start-up software:

- Dim the lighting in areas where the movement sensor does not detect any activity.
- You can install the individual application in up to five areas.

Function

Example:

Control of light fittings equipped with 1-10 V ballast

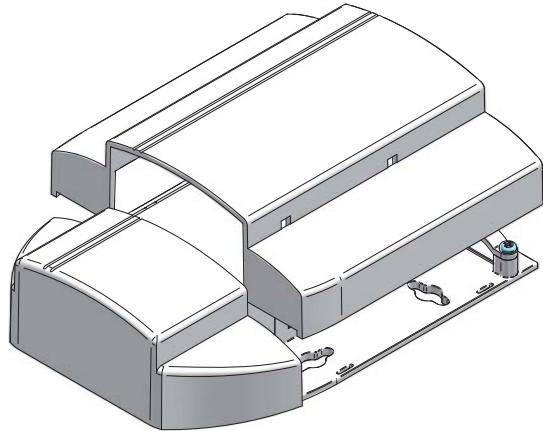

Switching on/off type 76-926 manually using the wireless push-button; automatically switched off via the wireless movement sensor.

With the lighting on and the wireless pushbutton type 76-925 in automatic mode, the lighting will be controlled in relation to the incident daylight. As the amount of incident daylight increases, the light in the room is dimmed to the specified light level. If the incident daylight is adequate in each zone, the lighting turns off in the relevant zone. One light sensor controls all three zones. The light is always switched on via the pushbutton and switches off automatically after a preset period, when the movement sensors do not detect movement in the area covered. You can switch on/off and dim the lighting manually via a wireless 4-pushbutton, e.g. type 76-925. For optimal operation and energy saving, at least one Luxstat Cut-off control should be placed in each zone/area.

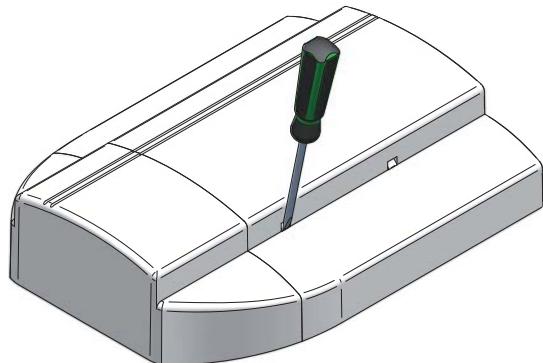

Fitting

Remove the Luxstat Cut-off control's cover and fit the unit using the installation holes.

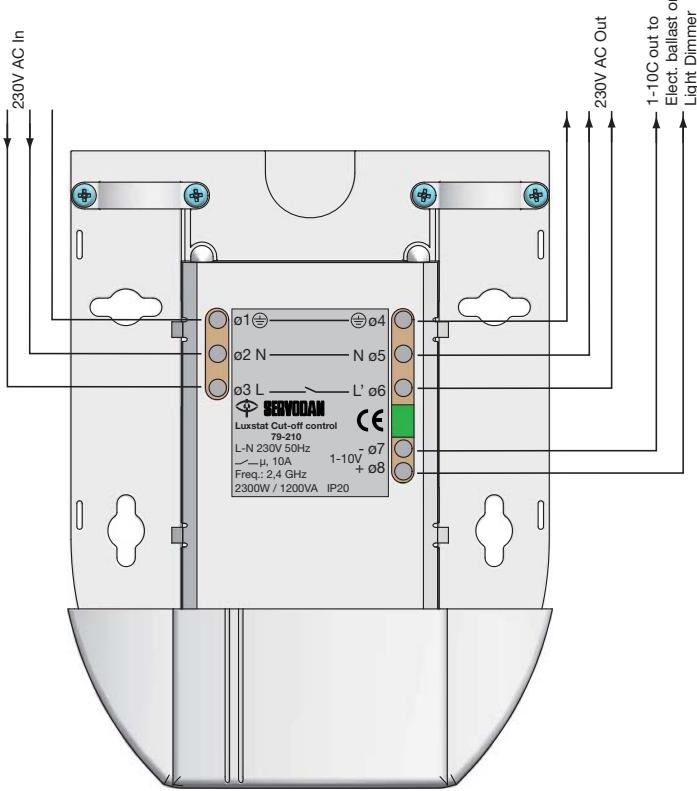

Refer to the connection diagram on the next page to see how to connect the unit.

Close the unit by "snapping" the cover back on. To remove the cover again, loosen the four "locks" and lift the cover off.

Technical data

Input:

Supply voltage..... 230 VAC 50 Hz ±10%
Power consumption <3 W

Output:

Relay contact NO, μ 10 A
Load
Incandescent lamps..... 2300 W
Fluorescent tube uncompensated.. 1200 VA
Halogen incandescent lamps..... 2300 W
Max. compensation capacity..... 140 μ F
Energy-saving lamps..... 58 (18 W)
Max. starting peak..... 80 A/20 m sec.
DIM 1 - 10V / max. 50mA

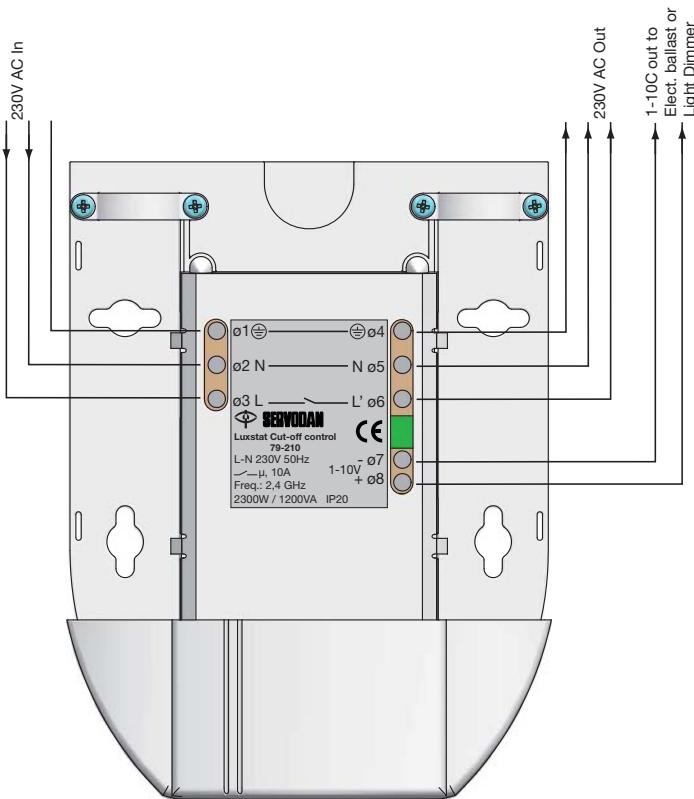

Performance:

Receiver..... Wireless 2.4 GHz
RF range 30 metres
Enclosure class IP 20
Insulation class Class II
Ambient temperature..... -5°C to +50°C.

Approval:

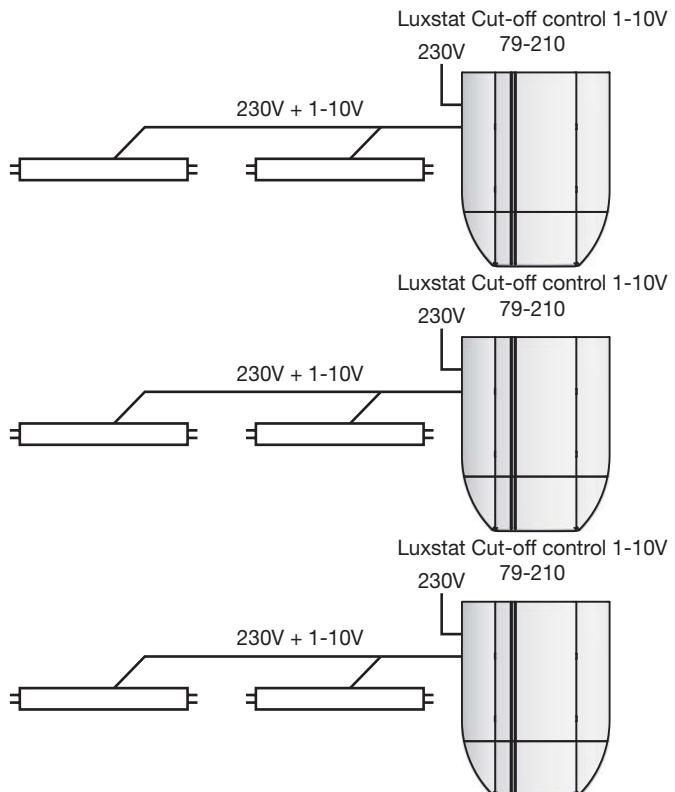

CE pursuant to EN 60669-2-1

Technische Daten

Input:

Versorgungsspannung 230VAC 50Hz ±10%
Leistungsaufnahme <3W

Output:

Relaischalter NO, μ 10 A
Belastung
Glühlampen 2300 W
Leuchtstoffröhre nicht kompensiert 1200 VA
Halogenglühlampen 2300 W
Max. Kompensationskapazität 140 μ F
Energiesparlampen 58 Stck. (18W)
Max. Einschaltpeak 80 A / 20 msec.
DIM 1 - 10V / max. 50mA

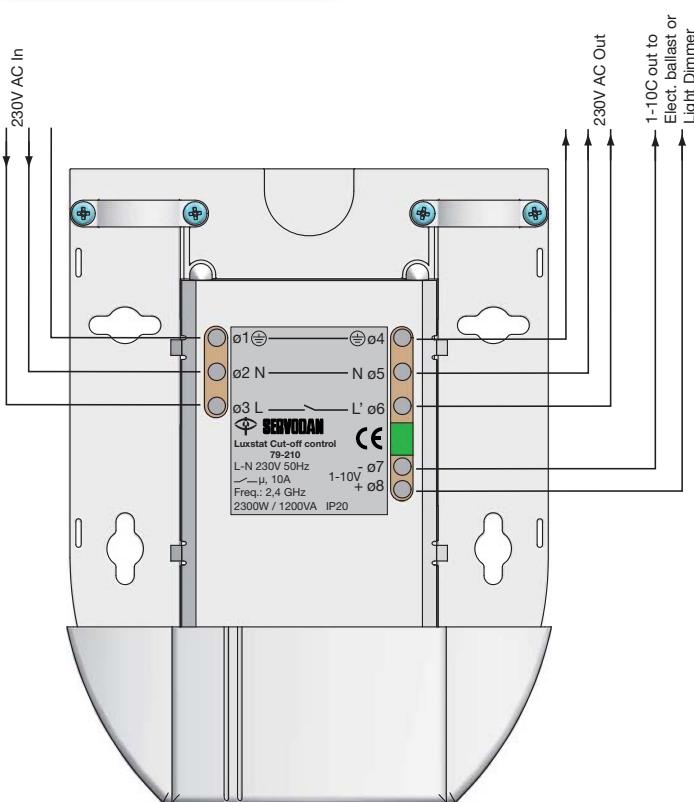

Leistung:

Empfänger Drahtlos 2,4GHz
RF-Reichweite 30 m
Schutzart IP 20
Isolationsklasse Klasse II
Umgebungstemperatur -5°C...+50°C

Zulassung:

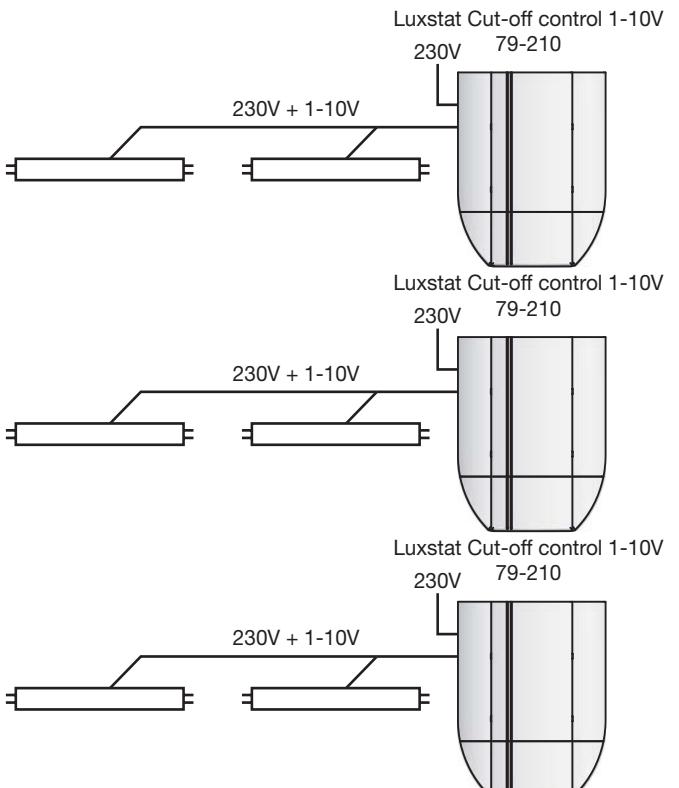

CE gemäß EN60669-2-1

Raccordement

Système

Avec des luminaires classiques 1 à 10 V

Caractéristiques techniques

Entrée :

Tension d'alimentation 230 V ca 50 Hz \pm 10%
 Consommation < 3W

Sortie :

Contact relais NO, μ 10 A
 Charge
 Lampes à incandescence 2 300 W
 Tubes fluorescents non compensés 1200 VA
 Lampes halogènes à incandescence 2300 W
 Capacité de compensation maxi 140 μ F
 Ampoules économes en énergie... Nombre : 58 (18 W)
 Courant maxi de démarrage 80 A / 20 m sec
 DIM (atténuation) 1 à 10 V / max. 50 mA

Performance :

Récepteur Sans fil 2,4 GHz
 Portée des RF 30 mètres
 Classe d'étanchéité IP 20
 Classe d'isolation Classe II
 Température ambiante -5°C à +50°C
